SCHOOL OF BANKING AND FINANCE

**FINS5530 Financial Institutions Management
Session 2, 2005**

Course Objectives

The unifying theme in this subject is the application of modern finance and international business theories to financial decision making and to the management of international financial institutions. The subject of bank and financial institution decision-making is approached from an international risk perspective. The course covers the major decision areas for international financial institutional management within the framework of a regulatory and 'corporate responsible' environment. The main topics covered are multinational financial institutions risk and its management (namely, asset and liability, lending, liquidity management, investment, investment management, capital management, off-balance-sheet-risk, market risk, liquidity risk and operating risk) as well as financial institutions performance analysis and strategic planning. The course will also cover issues related to international funds management, international financial services, global financial management, multinational banks and Asia-Pacific financial services.

The course objectives are:

1. To provide students with an understanding of the modern model of International financial institutions including funds management;
2. To Identify the main types of international risk confronted by multinational financial institutions and fund managers;
3. Apply relevant techniques to measure and manage those risks;
4. To provide students with an understanding of Multinational banks and fund management; and
5. To provide students with an understanding of international financial services

PREREQUISITE or CO-REQUISITE FINS5513 Security Valuation and Portfolio Selection
